

Introduction: The introduction explains that tourism is a major contributor to Indonesia's economy, supporting income, employment, and regional development. However, rapid tourism growth also brings environmental challenges. Hotels, as major tourism facilities, generate waste and consume large amounts of water and energy.

Name of the Paper and Authors

- **Title:** The Implementation of Green Housekeeping Management at The St. Regis Bali Resort
- **Authors:** I Gede Mangku Setiawan, Ni Nyoman Triyuni, I Ketut Budarma, and Dewa Made Suria Antara
- **Journal:** International Journal of Green Tourism Research and Applications, Vol. 3 No. 2 (2021)

Problem Statement

- Hotels significantly contribute to environmental pollution through waste, excessive water use, and high energy consumption.
- The housekeeping department, in particular, generates substantial waste (plastic, linen washing waste, guest amenities, etc.).

Objectives of the Paper

1. To analyze the level of implementation of green housekeeping management at The St. Regis Bali Resort.
2. To assess how well the housekeeping department applies green practices, such as eco-friendly supplies, waste reduction, energy saving, and green work procedures.
3. To identify whether green housekeeping initiatives are being practiced appropriately and consistently in daily operations.

Research Gap

Based on the article, the following research gaps identified:

Limited Studies on Green Housekeeping Practices in Bali Hotels

Most existing research focus on:

- Environmental sustainability in tourism

Insufficient Focus on Housekeeping Department's Environmental Role

Most existing research focus on

- Waste management
